EDUCATION

University of Maryland

4.0/4.0 GPA, Fall '25 - Master of Science, Data Science

College Park, MD

Sept. 2025 – Expected May 2027

Saintgits College of Engineering

Bachelor of Technology, Computer Science and Engineering

Kerala, India

July 2019 – June 2023

PROJECTS

Multi-Agent LLM Restaurant Recommender

Nov 2025 – Dec 2025

- Designed a Multi-Agent decision system (Pro-Con-Judge agents) to evaluate trade-offs and generate preference-aware restaurant recommendations with high explainability
- Engineered an API-driven inference pipeline integrating Yelp Business APIs that normalize and rank restaurants based on ratings, reviews, availability, and real-time metadata.
- Improved API latency by 76% (34 ms → 8 ms) by parallelizing agent inference in FastAPI.

Predictive Analysis on Formula-One Overtaking rates

Aug 2025 – Dec 2025

- Formulated CODI (Circuit Overtaking Difficulty Index) from 73 years of Formula 1 data by analyzing circuit and race-level features, clustering tracks into difficulty tiers using K-Means.
- Benchmarked Logistic Regression, SVM, and Random Forest models with cross-validated hyperparameter tuning evaluated via F1 score.
- Performed statistical tests to quantify the impact of regulation changes (DRS, aerodynamic rules) and track attributes on overtaking, aiding in policy evaluation.

Peekaboo Learn: AI-Powered Educational Mobile App

Jan 2023 – Apr 2023

- First author of the IEEE International Conference (RASSE 2023) paper “Enhancing Children’s Learning Experience: Interactive and Personalized Video Learning with AI Technology”.
- Implemented an Android learning app integrating on-device ML handwriting recognition, collected and analyzed average user session duration data to optimize scoring and feedback mechanisms through data-driven iteration, improving average session duration by 60% during beta testing.

EXPERIENCE

Packaged App Development Associate

July 2023 – July 2025

Accenture Song

Kerala, India

- Built and maintained Spring Boot microservices serving 10K+ users daily, while integrating CI/CD pipelines with SonarQube, Karate, and JUnit, to boost test coverage to 85% and reduce production defects by 60% tracked via incident/bug ticket trends over 6 months.

Research Intern

Dec. 2021 – Dec. 2022

International Institute of Information Technology

Hyderabad, India

- Collected time-series water level and salinity data using a 13-node IoT telemetry network with an hourly sampling.
- Built and end to end ingestion pipeline (ESP-01-WiFi → ThingSpeak) for continuous monitoring.
- Developed a real-time visualization dashboard to visualize trends for shutter operations and stakeholder decision making, making the project recognized and funded by the Government of Kerala.

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, Scikit-learn), SQL, Java

ML: Classification, Clustering, Cross-validation, Feature Engineering, Model Evaluation

Data Science: Data visualization, Predictive Modeling, Hypothesis testing

Cloud & DevOps: ETL pipelines, API development (FastAPI), AWS, Azure, Terraform, Docker, SonarQube, Git

Activities: TA at IIITH, Boot camp leader at Saintgits, participant in several National Hackathons

Interests: Data Science, Data Visualization, Predictive analysis, Machine Learning
